

**Title: Performance Evaluation of Human'S Motor Control Function With Safe,
Easy And Simple Observation of Body Movements.**

Recently, we have cheap and easy to use tools as Kinect to measure the motions and the poses of human body. We have new simple and easy methods to estimate the performances and the developments of human using the tools.

The author have developed one method to measure the performance of motor control function and have measured many peoples from seven years old to 90 years old.

This speech introduces the method and the measuring results together with the demonstration to measure the performance of motor control function of human.
